- Some herbicide labels list restrictions based on soil pH in water. This sample has an estimated pH in water of 7.7. Use this estimated pH in water as a guide. If you wish to have soil pH in water analyzed, contact your dealer or Extension specialist listed below.
- The soil should be tested every 2 to 3 years to determine the effects of your fertilization practices and to develop a new set of fertilizer and limestone guidelines.
- Only analysis provided. No recommendations could be made for the specified crop. Consult your regional horticulture specialist listed below.
- Particle Size Analysis: Texture: Loam ; % Sand: 27.5, % Silt: 47.5 and % Clay: 25.0.
